

Lyn Buchanan Target tasked by Lyn Buchanan - LB15

Remote viewed by Anita Ikonen - Method EEC

Target May 24 , 2006

Today May 16, 2018

Start 6:13 PM

Target May 24 2006

Thin vertical gray pipe, from ground it stands upward.

Target is more constructed area, than it being nature. Black and gray surfaces and structures, but not like trees and grass. Like thin steps.

These are smooth empty surfaces.

Not a friendly or soft or loving place.

Has a barren vacant kind of feeling.

It's cold there, there is no good sunshine to warm the place.

The surfaces are smooth and something slides across them like a boat, slides slowly not really fast.

Something went roundabout over my head, so the track that goes from the gray floor, curves upward and then upside down backwards and comes back down again in a loop.

On the track on the floor level at least, there are three grooves that are etched into the track, into these grooves fit the small wheels of the object that slides across this track.

Little wheels many on the vehicle, these fit into the grooves on the track on the ground.

The wheels are a bit loose, which is why when the vehicle sits on the track, its own weight pushes down on the wheels and the wheels become pressed upward, and if you lift the vehicle up then these loose wheels will drop down a little bit, because

they are a bit loose and not fixed vertically. Rattling sound from the vertically loose wheels.

It did a loop where in one part we were upside down!

LOOP that sits on the ground but the path inside the loop goes along the vertical plane.

The travel on the loop occurs on the INSIDE of the loop, not on the outside.

A person on the top of the loop hangs upside down with their arms hanging down and looking down.

I feel the neck hanging down stretched down.

SE (secondary element): man with white shirt and tie, guard or military he is at the wall, I found a wall there

Many small plastic wheels that rattle on the vehicle

SE tail of a small plane

Investigate vehicle: smell of black smoke of plastic, rubber

No shoes or feet because nobody walks here on foot

SE They push or pull a lever to make the object move

The smell of the black smoke again, smoke of rubber, plastic

Goes along a track, spews out black smoke at the back when it goes, goes slowly not very fast

First, people pushed it from the back into its place, before it would continue

It has blinking red lights on it, small blinking red lights

While the wheels stay on the ground

in the track, the vehicle can bounce
up and down into and away from
the wheels, the wheels with their
bars will extend and sink into itself.
Not bouncy like a spring! But

Vehicle uses a liquid fuel which has
a clear light blue color, it dripped down
on my hand when I was using my hand
to feel around underneath the vehicle
above its wheels

Sometimes it rains here and this floor
becomes wet from the rain i.e. this
is not inside of a room but is exposed
to the outside

The fuel smells like paint thinner liquid
and does not have the benzene smell

(The religious experience and my
eyeballs engaged in the clear visual
for the first time, see video)

People walk up until the tracks but
they do not enter onto the tracks
There is a lot of fresh air here

I drew the top view of the hull of the
vehicle. Water droplets are glistening
on the hull.
