

ProjectX Target tasked by ProjectX - PX13
Remote viewed by Anita Ikonen - Method EEC
Target 7615-6952
Today February 10, 2019
Start 5:58 PM

ProjectX Target 13
Today February 10, 2019
Start 5:58 PM

First relax before seeing the target number. Close all past and future targets.

Blue water, sparkling, reflecting, calm. Lots of sparkles on the water's surface. We are going somewhere on it on a boat. (This implies also the element of movement and directionality on the water's surface, to be listed as its own element!)

I hear the sprinkling of water that drips in chunks.

The back of my hand reaches against a black wall on the far right side, the wall of a mountain, coarse, dark, heavy, black, rough, stone.

Such a beautiful water I am looking at the surface of it, so calm and peaceful. Some water pours into it from above.

The water has a current and movement across it. Calm flat surface of water.

Water's calm surface is the main element.

Light and gentle. Movement across the water. Sprinkling of water into the water makes a delightful gurgling water sound. Air bubbles in the water, air mixing with water.

The water rises up into the air, there is a pillar of water existing in the air, whether it has risen or is falling down, this is above the flat planar water. It is pouring down.

Calm and peaceful place.

There is like a waterslide shaped thing that is diagonal and goes into the water like the shaft of a big spoon. The sun is shining onto the water's surface. We can go into the water if we want to.

It is very gentle and calm here. Mostly air about this target, white air. Air bubbles mix in with the water. Lots of air is mixing in with the water. We can slide into the water on the water slide.

Investigate the waterslide object: Something can go into the water on it and will be churning up a lot of air bubbles to mix in with the water.

Go swim in the water and find out what else might be there: There is so much air bubbles in and under the water that I feel almost as if I could breathe there. A splash of water. Sprinkled water. Gush of water across the water something slid into it.

What slid into the water locate it: I cannot find it but I do see the sprinkling of water that splashes upward. The yellow sun is shining to the left. Splash of water upward from the water's surface. Spewed water. Gush of water spews up.

Resonance method land: Yes there is land nearby. But this target has got more to do with the gentle white air that is above the water.

Resonance method water: Yes there is swirling gushing water here.

Resonance method mountain: Yes there is mountain on our right side, it is that same dark one that I came across earlier.

Resonance method structure: I feel something but I am not sure if that means a yes or a no.

Resonance method lifeform: Only some chirping frogs that are heard here.

Resonance method energy: No because this place feels so placid and calm.

Ok so land maybe, water yes, mountain maybe or yes, structure maybe, lifeform no, energy no.

We are in the air and something falls into the water.

Shook method: Finds rock and thin vine like hanging plants.

The air is a main element. Why would air be a main element? There is definitely water here at the target.

Verify water with probing tools: There is black mountain rock wall here. It feels very calm here with the air, and the bubbles.

Inspect the bubbles, are they in air or in water: Something can fall into the water. I go for a swim. The air is important.

There is air up on top of the mountain, and we can see a large view from there mostly calm water.

I am up on top of the mountain and I fall or slide down to the water and the air

bubbles get into my nose again. Water is the main element.

Search for energy: No it feels very calm here.

Search for lifeform: No this is nature landscape scene.

Search for structure: Yes the ramp that goes down into the water.

Investigate the ramp: I try to walk on it and I fall down back first into the water.

6:42 PM Pause.

7:27 PM Resume.

There is a plank or a board in the water. It is thin. After the pause I am again inside a black box room and that is problematic and it is a flaw in the functionality of ProjectX targets that I often have this same black walls room which is not consistent to the target.

The sun glistens and shines and burns on the water's surface. The surface of the water is twirling.

Notes: Start 5:58 PM

7:38 PM End session.

Choice: Water.

Calm water surface, water pouring into it, water splashing, the air above the water is relevant, lots of air bubbles mixing in to the water, current on the water, red board on water, black sharp mountains, sunshine on the water.

Feedback: Explosions, category is energy. I was too stressed out and upset that I clicked the submit button instead of the insert picture button so this one did not get my drawing submitted (either just like the one before last). Feedback states that my description is perfectly incorrect.

Note: I am feeling very stressed and upset because I have a new job starting early tomorrow and it is creating a whole lot of chaos and stress which is why I clicked the wrong button submit instead of insert picture because I was blinded by thinking about the new job tomorrow and stressed out a lot. Target contact is wrong, elements wrong, sensations and images wrong, fail session.

7615 - 6952

ELEMENTS LISTING

IE. Water surface calm sparkling blue.

IE. Boat going somewhere on the water.

IE. Movement directionality along the water's surface.

IE. Sound of sprinkling water that drips in chunks.

IE. Black mountain rock coarse rough dark stone large on the far right side.

IE. Some water pours into the bottom water surface from above.

IE. Waterslide shaped diagonally leaning object that goes into the water.
