

ProjectX Target tasked by ProjectX - PX2
Remote viewed by Anita Ikonen - Method EEC
Target 3915-6868
Today January 29, 2019
Start 7:09 AM

Today January 29 2019
ProjectX Remote Viewing Target 2
Start 7:09 AM

Relax first before seeing target number.

I cover the left black margin of the ProjectX page by minimizing the internet browser window and concealing it to the left side of the computer screen so that I do not see it. The black border is distracting I would prefer a white page. For this session I also will only see the target number and none of the major gestalt options that are further below.

INITIAL STAGE

This one feels pleasant and busy. There is something green, and something is sliding down from the left towards the right like on a slope. There is a high top up to the left like a peak at elevation. We can slide down the hill from top left toward right side down. And we can also look up toward the left to see the peak.

There is nothing unpleasant here. No one is fighting here. We are calm and at peace here. Nothing bad has happened here. It is light outside not dark and we can move around freely. The slope. Height and elevation. We can be here it is a place to go to. Nothing rumbles here. It smells murky here from 6868.

6868 is black color soil dirt. We can't really be on 6868. We have a long sloping wall. We are sliding down the slope. It is pleasant here. The ground is black soil, earth dirt. It smells bitter like the earth.

7:21 AM Start secondary stage.

SECONDARY STAGE

Probe slope: It is very pleasant here. We are dealing with a tall peak.

Probe tall peak: It is sunny here a yellow color. We can see all around from up here. We are happy here. But we slide down. We can fall down the slope. There is green color.

Probe green color: It feels wet and slimy and cold. And when we are standing at the green color we can look up to something that is way up there.

Go to target site: Something made us slide down. There is snow and ice, slippery.

We fall down into a hole. [Strange! I had the exact same person jumping down into a black hole in

the previous target. What is this?]

The sun is shining and birds are chirping. There are wooden planks that form a narrow walkway for people to walk across at a high elevation.

[Strange. 6868 forms the same black room as in the previous target. Could this be a problem with the tasking? These are computer generated target numbers.]

This is a place of high elevation, the sun is shining yellow, and we should not be afraid of this place.

Probe the slope: It is warm and pleasant here, the sun is shining. I am not afraid here. We can look up at the top when we are down below.

Probe the top, what is up there that we are looking at from down below, what do we see: It shines golden up there, something very warm and pleasant. We slide down from the top, sliding along the slope.

Something goes into our mouth, it is like we are skiing and holding our teeth firmly shut but the wind against our teeth feels like something going into our teeth. The golden glistening.

Probe the golden glistening, is it sunshine or is it an object or something else: It feels warm. But we slide down.

Sit on the slope: Black gravel further down on the ground. There is ice on top of the peak. It is rumbling down further below. There is water pouring down along the slope in little random streams. It is warm all around me. The wooden planks are there.

Probe wooden planks: They feel warm to touch. They are scruffy with thin shards of wood sticking out, they are not smooth or polished but look and feel weathered.

There is a stream down below the wooden planks.

7:44 AM End session.

Choice: Land / Water / Mountain / Structure / Lifeform / Energy

Choice: Mountain

slope, top, peak, high, elevation, slide, height, daylight, sunny, leaves, green, ice, snow, cold, slippery, wooden planks, skiing, sunshine, water, stream

Feedback: Oh great. The target is a big river which has a hole in it and on the side is a mountain with green plants growing on it and there is a walkway or road though perhaps not made out of wood. I had the hole, I really did but since I saw a man jumping into a hole in the last one I did not report it here since I thought it to be an error in the system that makes the targets. I am kicking myself.

However I also mention a serious problem with the grading system, namely that this target feedback picture has mountain and water on it. Sure, if someone remote views exactly that picture they will see that on this photograph the water takes up most of the space, but if someone remote

views by going to the target site they will describe the mountain and the water. Please see that I did see and write the black hole in my text report above. I chose to not report it because, as I already said, I had seen the same thing in the previous target which was the lemurs.

I would grade this session an A or a B even though I chose the wrong target category in the computer grading system. I would prefer a grading system which shows me several picture options. The computer automated grading for this session is completely unfair, and in this case everyone can see that and agree with me. My REPORT shows strong correlation to this target feedback (report is this text and my drawing) whereas my chosen major gestalt being mountain instead of water makes the computer grade this one as incorrect. So I am unhappy about that. I do not like these remote viewing sessions they will reflect poorly on a person's actual capability.

Please look at this target's feedback somewhere where it was made available and see that the mountain slope is definitely there. This is not a fail session, even though the computer thinks it is. (I even had the hole.)

Oh well. For future reference, always investigate all elements and do not judge them. I am still getting used to the targets from this system. If you see a stream then investigate its size. Though I do not like the grading method of this website. Who is to say that the major element is water and not the mountain? That is a personal opinion. Of course, target identity is the hole in the water, but out of five categories who is to say that this target site is primarily characterized by its water and not by its mountains?

I am VERY happy with the session and with my ability to correctly access and describe the target site, the correlation is good. I am unhappy with the way that the sessions are graded by the automated system and with the choice of major gestalt, to state that this session is a fail or that it has no correlation to target feedback gives a very skewed judgement of a person's remote viewing skill. Oh well it is for practice.

3915-6868

ELEMENTS LISTING

IE. Slope that we can slide down.

IE. Tall peak.

IE. Green color.

IE. Peak top to the left.

IE. Black soil dirt earth on the ground below.

IE. Daylight outside.

SE. Snow and ice, slippery.

SE. Birds chirping.

SE. Wooden planks that form a narrow walkway for people at high elevation.

SE. Something golden shining that is pleasant on the top of the peak that we look at from down below.

SE. Skiing.

SE. Something going into our teeth as we slide down the slope.

SE. Black gravel further down on the ground.

SE. Liquid water pours down the slope in little randomly placed streams.
