

ProjectX Target tasked by ProjectX - PX23  
Remote viewed by Anita Ikonen - Method EEC  
Target 5589-5822  
Today February 17, 2019  
Start 10:13 PM

ProjectX Target 23  
Today February 17, 2019  
Start 10:13 PM

There is the rusty red color again, facepalm. A soft rounded curve in that color, it makes a semicircle on the ground. We can't go any further from it, we move along its path turning back inward. There is a thin strap or two thin straps of yellow color that run upward from the center of that curve.

There is something blue on top of the two yellow straps. There is a balloon attached on top of the straps. We want to go someplace that feels soft. The yellow straps.

Touch yellow straps: They lead upward, they are not perfectly straight or rigid, they are loose and soft not tight, and something floats on top of them. There is the sensation of electricity along the yellow straps.

There is a strong gust of wind that blows from one side to the other meaning right to left or left to right. The yellow straps are important.

Electronics and metal sheet is attached at the soft red curve. The wind blows here. There is gentle motion. Rusty red color on the ground. There is electrical and metal. The wind blows into our device. We take shelter under the floating thing that is above. We take shelter in the red soft curve thing. The straps help to hold the floating thing in place. The yellow straps are hinges at their bottom. Electrical screech sounds from electronics. Yellow straps that hold something in place. We duck under the floating thing to take cover. Everything is soft and puffy.

The wind blows upward and keeps the floating element floating up above. The yellow straps are electrically conducting. They are hinges on a lid. They connect to something that is red below them. The red is a soft curved place and the wind blows into it from the side across and up. Soft and warm like a pillow. The wind blows here. We are taking shelter in it. The yellow straps are electrical.

I am investigating the soft purple red curve on the bottom rather brutally by stabbing at it with a pen and I find the floating thing above us again. The wind blows and keeps the floating balloon up there. The balloon floats us up as the

wind carries it up. Electrical sparks. I want to go to sleep on the red cushion. The wind blows up and lifts something blue up. The yellow strap is electrically conducting.

Electricity implies this target is either manmade structure or energy, as it cannot be any of the other ones without neglecting the electricity which is a fundamental aspect of the main element the yellow straps.

Look at red cushion from yellow straps: OUCH! The straps are electrically conducting!!! So we have definitely electronic structure or energy. (I say ouch but I love my electrical devices in RV.) Repeat: I feel how the thing above us is floating with the air blowing up into it.

Look at yellow straps from floating thing: Electricity runs up and down along the yellow straps. Energy is flowing in the yellow straps like little crawling quick ants. Look from floating thing to red cushion: I come across a hard metal around up here, is a sheet and dark gray color.

Look at yellow straps from cushion: I feel that something floats above the straps. Repeat: Ouch! They are electrically conducting! Look at floating thing from cushion: I find metal.

Probe red cushion: Something blows up and floats above us. The red cushion is very very flat.

Fingertips imagined against the target number on the ProjectX page reveal that the yellow straps are the main element. Metal. Electricity.

I am going to conclude that this target is a structure. The wind blows us up so that we are floating in the air above the site.

Shook method: The red cushion sets in the breaks so that it does not shift.

Fiber displacement method (one horizontal, one vertical): There is metal on the base on the floor. It has to be a structure.

Notes: Start 10:13 PM  
11:50 PM. End session.

Choice: Structure

Feedback: Photo did not upload even though was under 1 MB file size. I see that the yellow straps may have been the lamp posts in the foreground on the target photo. Photo is the deep mine again. Photo makes a lot of sense. Target category was land, I was tempted to choose land at some times but I still went with the structure. I am happy with this session because I recognize my report

with this target image and that is what counts, and I move on to new exciting destinations. This one went well even though I chose a different category for it, the correlation I think is there.

# 5589 - 5822

## ELEMENTS LISTING

IE. Red curve on the ground.

SE. This red cushion is very very flat.

IE. Two yellow straps that are attached at the center of the curve on the ground and reach up vertical.

SE. They are hinges at their bottom attachment to the next element.

IE. Something blue on top of the straps.

SE. A balloon is attached on top of the straps.

SE. Sensation of electricity along the yellow straps.

IE or SE. A strong gust of wind blows from one side to the other meaning left to right or right to left.

SE. Electronics or thin metal sheet is attached at the soft red curve.

SE. Hard metal sheet rather high up, dark gray color.
