

Your Sessions

Session For: 4166 - 4443

Your Selected Gestalt Category was: Structure
this is incorrect

🕒 Start Time Session: 30/Jan/2019 10:11 hrs

🕒 End Time Session: 30/Jan/2019 11:42 hrs

Session Summary:

water, lamp pole, yellow, vertical, waves, floating, island with green grass, shining, light, glass, white railing cage, red floor goes around, flashlight

Feedback For: 4166 - 4443

The Glory Hole - Monticello Dam

Your Target Gestalt Category was: Water

🕒 Date of the Target Photograph: 16/Feb/2017

The dam's morning glory type spillway, known as the Glory Hole, is 72 feet (22 m) in diameter at lake level and narrows down to about 28 feet (8.5 m) at the exit. At the lake's peak level the spillway can drain 48,400 cubic feet per second (1,370 m³/s), which occurs when the lake level rises to 15.5 feet (4.7 m) above the level of the funnel.

Water spills over its lip when the lake reaches 1,602,000 acre feet (1.976×10⁹ m³) and a reservoir elevation of 440 feet (130 m) above sea level. The last time the reservoir naturally spilled through the glory hole was on the afternoon of February 16, 2017.

After a number of storms had caused the lake level to rise 35.5 inches since January 1, 2017, the reservoir was on the cusp of spilling once again at 439.2 feet. Eager to witness this event, a number of local boaters and recreation enthusiasts generated enough wake to cause the reservoir to spill, albeit briefly, at 1:45pm on February 13, 2017. Lake Berryessa reservoir filled and ran into its glory hole spillway for the first time in over a decade on February 16, 2017 at approximately 3:00 PM PST .

Current lake level status is available at Solano County Water Agency.

Swimming near the Glory Hole is prohibited. In 1997, Emily Schwalen of Davis died after being caught in the current while swimming near the Glory Hole and being swept down the pipe after holding on to the rim for about 20 minutes.
