

ProjectX Target tasked by ProjectX - PX9
Remote viewed by Anita Ikonen - Method EEC
Target 8228-5493
Today February 6, 2019
Start 10:51 PM

ProjectX Target 9
Today February 6, 2019
Start 10:51 PM

Before obtaining this target number, I take a moment to relax and to close previous and future targets.

There is a ladder or a staircase that leads us down. Surface that is slippery to the hands. Purple and red and slippery. Stones are slippery with water on them. I shake the target site around (new method, not shook method but shaking as if we had a shoebox and shake it side to side, as opposed to the more profound shook method which belongs in the third stage of my usual RV procedure) and I hear a delightful sound of water.

We are in a cave of stone with water. Stones. These are smooth stones not jagged or sharp.

We go down the ladder. Aha, so we are under the ground. We are in a cavern space under the ground, the entrance is up above us. Purple and red color. We definitely go down under the ground.

We have to go down. Let's go down.

SECONDARY STAGE (and initial stage can also continue)

I go down to the cavern. There is water here. I jump down into the hole. I can walk around here and explore the place. We are inside a mountain. There is a path here inside, and we can walk on it. We are not out in the open. There is water trickling inside here.

Purple and red.

Probe purple: It is stuck. We can go down to it.

We can sit down here on the rocks. The rocks lead to some hidden treasure.

There is a stream of water down there in the hole. The stream of water washes against smooth rocks. It is dark here and we can be hiding. Slippery for my hands on the side bars of the ladder. Water is what makes it slippery.

Probe ladder: It is actually landings of rock.

Resonance method land: Under ground.

Resonance method water: No something else is the target.

Resonance method mountain: Maybe.

Resonance method structure: No.

Resonance method lifeform: No, because this target is a place that we go to.

Resonance method energy: No, but maybe that a human could go somewhere deeper into the cave.

The target seems to be mountain.

The water leads further inward into the mountain and becomes a small waterfall inside the mountain. It seems that the treasure might be the waterfall inside the mountain caverns because it is in the same place, the small waterfall inside the cavern is what we find when we go to where the treasure would be.

8 Something going down.

2 That place of rock under ground.

2 The falling down into that place and the waterfall falling down there below.

8 The smooth flat stones in the first chamber room.

5 The crashing sound of water and stones down there.

4 The dark stone walls.

9 The smell of the dark down there.

3 The happiness of finding the light over at the entrance. This also shines like the treasure that we have.

There is a place to explore down there. The water is splashing around there.

So we do not have land. We do not see structure (structure implies manmade). We do not find lifeform. We do not feel human emotional energy. The target is either water or mountain, now we must find out which one.

I try to solve the puzzle by reaching toward the target feedback picture. It is dark here, the light fades away. We have a chamber deep embedded in the rock. We can go here. A bat is in this cave. The water is here. Water or mountain as the target category?

There is a treasure down in the underground cavern.

Probe treasure: To find the treasure one has to go further in and downward in the cave. It is dark here.

I go outward further away from the things I am seeing and find that the target site I am seeing is restricted with boundaries because it is inside a black box, that black box anomaly again.

"Submit Session" button signal down on the source page says that the target is water.

Looking at the date time stamp for when target number was generated, as a target number. We go somewhere, packed inside mountain rock. There is a feeling of urgency. The water goes into the mountain.

12:10 midnight. End session.

Choice: water

ladder, slippery, purple, red, smooth stones, water, cave, under ground, cavern, treasure, waterfall

Feedback: Jesus Christ. Just look at the target feedback. Jesus Christ. I nearly fainted and my eyes must have turned into the size of dinner plates. Hmm. I will sleep good on that one now that I am going to bed. But, phew! Gee, hm, phew, ahh. Wow.

8228 - 5493

ELEMENTS LISTING

IE. Ladder or staircase that leads down.

SE. Upon closer inspection is instead landings of rocks.

IE. Surface that is slippery to the hands.

IE. Purple and red.

SE. Purple is stuck. We can go down to it.

IE. Stones are slippery with water on them. Smooth stones, not jagged or sharp.

IE. Water on the stones making the stones slippery.

IE. Cave of stone with water.

IE. We are under the ground.

IE or SE. Water trickling inside the cavern.

IE or SE. Hidden treasure found in the caverns.
