

Noetic Sciences Target tasked by IONS - NS13
Remote viewed by Anita Ikonen - Method EEC
Target no target number
Today March 6, 2019
Start 10:23 AM

Noetic Target 13
Today March 6, 2019
Start 10:23 AM

I am sick today I had fever for the past two days and now have a cough and just a tiny bit of a flu. They are also drilling in the basement it is very loud. I am not in a closed room but there are people in the apartment. My body feels uncomfortable. I still want to remote view because this is the most fun that I know of.

10:25 AM

This one is very brown and earthy, there is a big rock boulder on the right side, it has a gap on its underside and it looks as if it wants to lean down to fall over. There is no water here. Very brown colors.

I now disconnect the internet USB and I hope that it does not interfere with the signal or with access to target site.

It smells earthy here from the brown ground.

Secondary probing stage

I sit on the ground and I find that I can go under into the crevice.

The boulder is going to tilt and fall over.

I seem to find by running my finger across the gray box on the source page that there is another gray boulder lying flat in the middle, it looks exactly as if the vertical boulder would have fallen down.

There is no blue sky on this one.

Investigate the brown background: It is against a solid material.

I really feel that the boulder is going to fall over.

I go to the back of the boulder and there is a strong wind there like if we are on high elevation in the outdoors, a very strong wind blows there and you can even hear the powerful wind there. This kind of wind is not in our main target area.

I climb on top of the boulder and find one small red flag there.

I am struggling with the probing stage due to my flu it seems. I will therefore end the session here. I think what I have so far can be checked for correlation against the feedback.

11:15 AM End session.

12:25 noon Feedback. The target is two horses. The horses are brown. The background is grass with yellow wild flowers. I did not sense a lifeform. There is no flag. They are not boulders. My result is acceptable, I recognize the color and the shapes. It is not a good session but I would grade it a C. I am not capable of remote viewing when I have a flu because I was not able to put any effort in at all I am too weak, the initial elements were still good enough, but the effort stage was not possible because I am sick. I will also make this feedback session short and not the 30 minutes or more that it is meant to be.

12:27 noon end notes.

ELEMENTS LISTING

IE. Brown color in background and surroundings all brown.

IE. Large boulder on the right side, it is tall and mostly vertical oblong in shape, smooth and not with rough jagged surface, what is interesting is the gap on its underside between the rock and the foundation or ground and that the boulder leans as if it is almost going to fall over to the left side and down.

SE. One small red flag on top of the boulder.
