

Noetic Sciences Target tasked by IONS - NS16
Remote viewed by Anita Ikonen - Method EEC
Target no target number
Today March 13-14, 2019
Start 1:18 AM

Noetic Target 16
Today March 13-14 2019
Start 1:18 AM

This session follows right after the previous session without a sufficient resting period in between the two sessions.

I sensed the initial impression to be an animal like a large cat, I sensed the fur smell of it and also felt and heard and sensed the growling.

It is soft, orange brown, cute, low, elongated. On its northern (inward) side is a solid black cube. Another black solid but rectangle with its long side in the horizontal, is on the left adjacent to the soft orange brown.

The animal could be a sofa. Soft orange brown fur.

Secondary probing stage.

There is a step up to the left, the block forms another block above it to the left.

There are two antennae or ears on the animal's head. They are angled from each other forming like a V.

The antenna has got brown spots on it like spots of a leopard.
Under the antennae is a hole that is blue in color, a tunnel lying with its axis in the horizontal plane.

The main orange furry body is curved as a semi-circle and is low to the ground, the curve bulges toward the back left.

The soft semi-circle orange looks like a molten material, like a fabric, a floppy material that lies flat against the ground but has some thickness to it is not flat but is lying against toward the ground.

Investigate underside of fur: the hairs are reaching or directed upward not downward.

1:43 AM I will end this session prematurely and not do a thorough secondary or third stage because it is later and I want to go to bed. This one would have been fun to explore further.

Feedback: The target is several fighter planes lined up and in the sky. The V shape of the antennae is prominent as a V shape formed by wings and tail of the airplanes. Nothing is soft or orange brown. The black box and rectangle cannot be identified on the picture. The system of the website scores me with zero out of 100 points for this one for my submitted parameters. Perhaps the forests down

below in the picture looks like soft, but that is not an acceptable explanation. Perhaps it was wrong of me to do a session right after a previous session, as well as to do a session when I am tired. The leopard spots could be the lakes that have such shapes in the landscape below. I was not committing 100% of my effort, as I do not usually for these Noetic targets. Instead I seem to be trying to get just enough to see a correlation to the feedback image.

1:49 AM End notes.

ELEMENTS LISTING

IE. Soft orange brown animal like a big cat.

SE. Bulges like a semi-circle toward the back left and is low to the ground.

IE. Black solid cube on the northern (inward) side of the cat element.

IE. Another black solid but rectangle on the left side next to the soft element. Its long side is on the horizontal.

SE. Step up of another parallel black rectangle above and to the left of the first one.

SE. Two antennae or animal ears angled away from each other forming like a V.

SE. The antenna has got brown spots on it like the spots of a leopard.

SE. Tunnel with its axis in the horizontal plane is under the antennae. Tunnel is blue in color.
