Start 5:05 PM

Noetic Target 27
Today March 21 2019
Start 5:05 PM

location: bed, living room, family home. People are about but it is nice and quiet and calm and a lovely sunny day.

No meditation prior, I want to try with the alert mind. I am sleepy and yawning but it's ok.

There is no nature here, no green no grass or trees. We are in a large-scale industrial site. There is also no water here.

6:00 PM End session, I could do more so this session does not reflect my full potential in RV, but I am sleepy and want to see what it is.

First guess: Huge industrial facility with a huge hole, structures out of steel.

Second guess: Steel pipes structure.

Third guess: Related to cargo airplanes, industrial hangar airport facility but not for public use.

Fourth guess: none

Feedback: White bunny against white background of snow. I grade this session with an absolute fail. One of the worst sessions I ever had. Zero correlation, exactly everything in my report is wrong. Why did I fail this session? Who knows. Noetic targets are always harder than Daz and Lyn targets. A recent Noetic target also failed, I think it was the one before last? Also I am sleepy. But I had initial impressions and lots of initial elements and did some elements probing, but I guess I was at the wrong address or something else went wrong.

6:06 PM End notes.

ELEMENTS LISTING

IE. There is a huge brown hole, we are sinking down into the brown hole in the ground. The hole is huge in size.

P. Huge, the size of huge mountains.

IE. There are three, same-sized, pale yellow spheres sitting at some space between them on the north shore of the top perimeter of the hole. These are blinking lights.

SI. This whole region at the level of the top of the hole, is filled with these blinking little lights, I found more of these lights at the right border.

P. The lamps have a thin black piece connected to under them.

IE. There are two vertical red tracks, with some small gap between them, on the north wall of the hole.

SI. Could be that these are planks that go across the hole at the top, across the diameter.

P. These boards have got a thick coating of thick paint that they were painted with. Left end of board terminates at a U-shape that faces toward the plank, and the right side end of the board curves down, see profile drawing. These red things are bent curved at one end making them shaped like a pipe.

SI. One red board in the horizontal is found on the right side, a bit higher up than the level of the top of the hole.

SI. I found a cage structure of red bands or pipes, narrower on the bottom around, then they all bend, then they are wider at the top, see drawing.

IE. Nuts and bolts of engineered industrial constructed site.

SI. These are found on the inner left side wall of the hole near the top of the hole.

SE. Large-sized airplane or industrial facility, not for everyday people nor for doing everyday things, is off-limits for everyday people and not for everyday activities.

SE. There is white on the floor at the level of the top of the hole. There is also a vertical white line or actually band at the south wall of the hole.

SE. I find one diagonal yellow board or band from upper left down diagonally ending at the border of the hole.

P. The yellow band curves at its lower end and continues into the hole some distance.

SE. There is a blue band also, on the south outer wall side of the hole.

SE. On the bottom region of the hole, there are several blue panes of glass that go all the way around the wall.

SI. There are windows.

CONNECTIONS

Red band is connected to yellow band
